Full job description

Your new company

A market-leading provider of scaled, technology-enabled administration solutions, which operates across equities, pension and superannuation to investments, property and other financial assets.

Your new role

As the Data Engineer you will:

- Design, develop, and implement data solutions using MS stack tools.
- Executing against the Data and Analytics roadmap, including optimisation of the existing capability as well the introduction of new capabilities
- Identification and implementation of continuous improvement initiatives
- Determining business needs and drivers through stakeholder consultation and collaboration
- Work to truly understand the business of your customers; understand their strategic goals and key issues
- Keep up to date with latest trends and best practices in data technology
- Strong interpersonal skills to engage with people at all levels of the organisation and build strong relationship and trust with clients and internal stakeholders.

What you'll need to succeed

- Advanced SQL skills
- Highly experienced in SQL database development and end-to-end ETL processes
- Experience working with SSIS and other data transformation tools
- Expertise to Implementing Data Warehousing Solutions
- Developing Modern Data Warehouse solutions using Azure Stack (Azure Data Lake, Azure Data Factory, Azure Databricks).
- Excellent Understanding of Modern Data Warehouse/Lambda

Architecture

- Proficient in a source code control system such as GIT; Strong T-SQL scripting and data modelling skills
- Proven background working with business stakeholders to understand requirements and present recommendations
- Coding Spark Scala or Python
- Strong relational and dimensional Data Modelling skills.

What you'll get in return

This is a 6 month contract position. Paying up to \$850+ super per day. Be part of a company with clients that include some of the world's largest corporations, pension funds, and financial institutions.
